

Blue Nova Technology, L.L.C

433 West Harrison St Box# 4430
Chicago, IL 60680

Hello World!

As one of Chicago's newest start-up companies, Blue Nova Technology wants to introduce ourselves to your company. As a high-tech company, we are driven by our passion to innovate in all markets; increase access to World Class Services and Technology. Simply, with every firm we engage, our goal is to increase productivity through innovative IT Solutions. Our mission is to become the world leader in Mobile and Web Development; with wearable innovation and a lead Information Technology Solutions Provider to our clients. Blue Nova Technology would like to share our newest technological developments that 85% of surveyed customers have expressed interest and stated would spend more in your venues if this service is activated.

We hope to satisfy your customers and offer solutions that they are excited for us to offer you; while assisting your business in increasing your table turnover rates, customer satisfaction rates, and customer loyalty base. We would like to help you drive larger foot traffic and sales by giving your customers the ability to track a running tab from their personal device. Without QR codes, Table Numbers or Lines, our Patent Pending Platform will allow your customer to walk into one of your venues, check in, order and pay, or request for a wait staff from their own devices. Current advances have allowed us to develop technology that has been tailored to your industry that will give you the tools to engage tech savvy customers. Reduce your operational cost, due increased efficiency and grow your business.

Customers will have access to your venue's products and services from their mobile device on demand; with the use of a geo-fence, that can target them to within 2-3ft of your venues doors or designated service areas. Modestly put, our systems will provide your venue with a world class geo-fencing, marketing and order management system. We look forward to working with you and displaying the cost effective solutions and benefits of the Light-Life application along with all its services.

Sincerely,

Nathaniel D. Smith
